

for Commercial Accounts

Built in the USA since 2002, with over 1000 installations nationwide - iRecord cost-effectively helps organizations record, manage, share, and use high-quality, on-demand, digital video/audio recordings.

While iRecord's roots are in public safety and forensic interviews - iRecord is also ideal for commercial accounts, such as: law firms, schools and universities, retailers, entertainment venues, healthcare, hospitals, and any business, company or organization that needs to digitally record (on-demand) – events and/or proceedings that could have legal, ethical, operational, or financial consequences.

iRecord is effective for interviews, demonstrations, teaching and training, employment screening, conduct reviews, remote attendance and monitoring, HR, and any scenario where a critical interview, demonstration, class, tutorial, meeting, procedure, or action needs to be recorded - and then have those recordings securely documented, indexed, stored, distributed, retrieved, shared, and leveraged.

iRecord is an easy-to-use, password protected system that allows you to start and stop recording, with the touch-of-a-button, or the flip of a switch. The recordings can be stored in the tamper-resistant vault, and burned to authenticated, watermarked DVDs and CDs - playable on any PC or DVD player.

iRecord handles multiple rooms simultaneously, and networked if desired. Recordings can be securely shared by others inside, or outside your organization. Additional benefits available with iRecord include real-time note taking, transcription capability, remote one-way prompting, disc-spanning, redaction, case management, multiple storage options including RAID and VMware compatible, and much more.

iRecord has 4 customizable platforms to choose from: Mobile, Lite, Professional, and Enterprise.

iRecord is supported by an international network of certified Resellers, who can help you choose the best option for your organization, and assist with the installation, and support, of your iRecord solution.
